I have a DB in SQLite and I need to select all the integer field values with specific format. The format is like '0005' or '0005.0001', i.e. they have value in format '000[0005]'. A: You can use LIKE (case-insensitive):

SELECT * FROM MyTable WHERE col LIKE '000%5%' Photocross-linking of the lysine analog 6-amino-n-methylcoumarin to lysyl residues in bovine gastric mucin. Bovine gastric mucin (BGM) contains at least five different lysyl residues that react rapidly with the lysine analog, 6-amino-n-methylcoumarin (ANC). The number of photoactivatable lysyl residues in BGM was determined by competition experiments with model sequences of known number of lysyl residues. The stoichiometries of the covalent adducts formed were determined by reverse-phase high-performance liquid chromatography (RP-HPLC) analysis. The total number of lysyl residues in BGM was determined by the competitive cross-linking of trimethyl lysine with the lysine analog, 8-amino-adenosine-3',5'-cyclic monophosphate (cAMP), and was found to be greater than 12,000. This suggests the presence of multiple photocross-linking sites. The stoichiometry of the covalent adduct formed from the lysine analog, ANC, was determined by densitometry using a bromophenol blue
