It is important to note that we only work with mainstream software products and focus our reviews on the positive aspects of those products.Q: Redis: get the SUM of a multi-key field I have a collection in Redis called 'metrics' and I'm building a web app using Node, Express, Mongoose, and MongoDB. I want to be able to build dashboards for key performance indicators - specifically, I want to be able to grab the total volume of an ad by source (amongst other things), but this question is about the key performance indicators, so my question is... How can I get the total volume of an ad with its source? The current state of my metrics collection is like this: { "SourceID1": 2, "SourceID2": 3, "SourceID3": 4, "TotalVolume1": 4, "TotalVolume2": 6, "TotalVolume3": 8 } A: As the documentation says, you can get the aggregation of a collection with ZUNIONSTORE. So, you would just add more ZUNIONSTOREs, each of them aggregating one or more collection. For example

What's New in the?
