KEYMACRO is a tool that facilitates the maintenance of various data types within Microsoft Access databases. It features data type specific drag-and-drop code generation and/or interface creation as well as the automated assignment of unique sequential identifiers (IDs) to data fields. With the help of the key macro, you can create data field related forms for any data field in any table. In addition, you can also generate the ID field and any other related field that you need. Furthermore, you can automatically generate up to 50 data field-related forms and attach the data fields to the appropriate tables. OlapCube Writer has a smart look and feel that reflects the outlook and structure of Access databases. Moreover, you can choose from two different versions of the standard Access database template. OlapCube Writer allows you to generate data forms based on your own customized data types. It has a preset range of data types including option box, date/time, drop-down list, currency, password, text, character, icon, and text area. In addition, you can also create your own data type. The generator allows you to edit the data field and data type. You can also modify the properties, drag and drop, and assign a sequential ID to the data field. In addition, the built-in generator also allows you to dynamically generate data field-based forms that automatically appear in the report. Moreover, you can also save the form as an active workbook file and save to the user's desktop. OlapCube Writer also offers two data editing wizards that help you to quickly and easily edit data in your Access databases.
