Dvornikov Mikhail

Alekseyevich Dvornikov (; born
December 27, 1954) is a Soviet
and Russian scientist, Doctor of
Biological Sciences, professor,

Doctor of Chemical Sciences,
Herbalist. Biography Dvornikov
graduated from the Department
of Linguistics and Applied
Linguistics of the Moscow
Linguistic Institute in 1977.
From 1979 to 1983 he worked
at the Institute of Linguistics
and Lexicography of the
Russian Academy of Sciences,
then, at the same time, he was
pursuing scientific studies in
Denmark. From 1983 to 1989
Dvornikov worked in the faculty

of science of the Moscow State University. Later, until 2000, he lectured at the department of Biology of the Moscow State University. Dvornikov is a researcher and creator of the Herb Base and Herb Universe (abbreviated as HBU) international databases of natural medicinal plants. In this database, the ethnomedicine is the most widespread and frequently used method of medicine worldwide. Besides,

he is famous for his ethnomedicine researches among the indigenous peoples of the Siberia and Central Asia. Dvornikov's botanical collection contains more than 1000 kinds of collected plants. He is the author of more than 100 publications. He is author of bibliographies. The HBU contains information on more than 25,000 specimens of medicinal plants. Dvornikov's research interests include:

ethnobiology, comparative ethnology, applied ethnology, ethnomedicine, ethnomycology, phytochemistry, biochemistry, molecular biology, ecology and systematics of traditional herbal medicine. He has traveled widely in the Siberia, the Caucasus, Central Asia and Western and Southern Asia, investigating traditional plant use and traditional health remedies, which is the core of herbalism. In September 2011,

Dvornikov was one of the organizers of a scientific expedition to the Loža river system in the north-eastern region of the Slovenian Carinthia, part of the larger alpine region. He

ResearchRecurrence of gastric
mucosal erosion and metaplastic
mucosa after eradication of
Helicobacter pylori infection.
We retrospectively evaluated
gastric mucosal injury and

gastritis, as well as the development of gastric neoplasia, after H. pylori eradication in a group of patients with chronic active gastritis. Archival gastric biopsies from 5 H. pylori-positive patients with chronic gastritis were re-examined and correlated with the status of H. pylori infection in two consecutive endoscopies 2 years apart. In the biopsies of the first examination, the degree of

inflammation, severity of atrophy, activity of gastritis and presence of mucosal erosions were evaluated. Eradication of *H. pylori* by antibiotic therapy resulted in mild reversion of gastric inflammation and atrophy, without important changes in the severity of gastritis. However, severe antral mucosal injury was present in one case of superficial gastritis and in 4 cases of atrophic gastritis. One case of intestinal

metaplasia developed in the foveolar epithelium. The clinical implications of these findings are discussed.

Q: Good exercise for logarithms Does there exist a good exercise for logarithms on the open end of the epsilon-delta definition of limits? For example, say I am asked to show that $\lim_{x \rightarrow \infty} \frac{1}{x} = 0$
