We evaluated the effects of RAD001 on murine collagen-induced arthritis (CIA) and compared the effects with rapamycin. Treatment with RAD001 after CIA onset attenuated the CIA-associated joint destruction, prevented bone erosion and decreased the level of inflammatory cytokines, including interleukin (IL)-17. In contrast, treatment with rapamycin after CIA onset only attenuated bone erosion and had no beneficial effects on the arthritis-associated joint destruction. Treatment with RAD001 and rapamycin together at the initiation of CIA and at the clinical onset of CIA attenuated both joint destruction and bone erosion.
