What's New In AutoCAD?

AutoCAD is the de facto standard for 2D CAD in the world of building design and construction. In order to be competitive, CAD software developers are continually striving to improve the user experience and streamline design and engineering processes. As a result, the latest versions of AutoCAD incorporate many features that offer more productive ways to work with CAD data. Newer features, in addition to adding more functionality to the software, also create new workflows that can be more efficient for your daily design workflow. Read on to learn more about the most recent features in AutoCAD, including Markup Import, Markup Assist, Grid Reference, Scaling and more. Markup Import and Markup Assist: Rapidly send and incorporate feedback into your designs. Import feedback from printed paper or PDFs and add changes to your drawings automatically, without additional drawing steps. (video: 1:15 min.) A new and improved Markup Import tool makes it easier to send changes back and forth between teammates without leaving the drawing and dramatically speeds up the editing process. Markup Import is designed to handle printouts from paper or PDFs. With Markup Import, you can open a file on your computer or send it by email. You'll then be able to quickly add comments and edits to a drawing. Your changes will appear on the canvas in real time and can then be incorporated into the design as you like. Markup Import provides several options to help you send comments quickly. • Markup Import supports text annotation as well as a variety of other objects, including toolbars, dimensions, reference lines, dimensions, symbols, dimension shadows, hatch patterns, and region options. • You can also quickly select a part or assembly from an existing drawing and send it as a PDF. • You can also use Markup Import to import the feedback from a web-based inspection tool and insert it directly into a drawing. In addition to improving existing methods of document-based design and engineering, Markup Import also provides new workflows for real-time communication and collaboration between teams. With Markup Assist, you can take advantage of real-time feedback. You can import a drawing from a local computer file or from an email attachment. You'll be able to import a file from a remote location in a matter of seconds. Drawings
