AutoCAD is used to create and edit: Drawings PDF reports Text documents Graphs Theadboards Drawings Text documents Graphs Theadboards AutoCAD uses its own terms and commands to define text and graphical objects. It is not the same as the standard text editor, which is a commercial product from Microsoft. When you want to edit text with standard tools, you will need to choose the correct text file format, and some text editors will need special parameters to work correctly with AutoCAD. The first step is to create a new drawing file. Open a new drawing or open an existing drawing file. AutoCAD opens in wireframe view, which is a preview of how the drawing will appear when it is finished. For a full-screen image, click the Image Options icon (the small camera icon) on the Options toolbar and change the Image Type to Wireframe View. Step 1: Open a New Drawing in AutoCAD To open a new drawing file, click the Add New icon. Step 2: Choose a Drawing Template Click the New icon at the bottom of the AutoCAD toolbar to open the New Drawing window. The Drawing Template window lists available drawing templates. When you choose a template from the Drawing Template window, you can then use the template in the future to open a new drawing or view a new drawing. Step 3: Change the Template Settings The template settings control how the template is loaded. The settings will depend on your operating system. Open a command window (Windows) or open an existing command window (Mac) by clicking the New icon at the bottom of the AutoCAD toolbar. Mac users should use a command window instead of the Application menu. Step 4: Choose the Template to Open Press the T key on the keyboard to open the template window.
