October 24, 2003 You could be forgiven if you think about death and afterlife in two distinct categories: the afterlife is where you're going to be when you die, and the afterlife is what you will be doing in heaven. But both notions are part of the same concept, the idea of the afterlife. The differences are semantic: the first category, the one where you are when you die, is clearly for the most part composed of the sleeping, the dead, the corpses, and the formerly living. It is a place of almost silent, calm, quiet, no motion, no activity. In its current physical form, the body, death is a state of rest. The second, the afterlife, is a state of activity, a place where we live forever. Over the course of the nineteenth century, the ideas of the afterlife and the dead underwent profound shifts in the public mind. A funeral home in St. Louis, Mo., offers a tour of the institution, from the basement where they store embalmed corpses, to the chapel where they hold services for the deceased, to the rooms where they conduct research on diseases. Next to the chapel is the crematorium, where in a year and a half one hundred bodies burn. The view is beautiful: stone walls, ivy, a blue, soothing sky. The crematorium would have looked like this long before the notion of hell became popular. The idea of the hereafter came about in part to explain away the religious behaviors of the dead. They were no longer subject to the forces of the divine, because they were no longer alive. We bury our dead because we don't want to see them under the ground any longer. We don't want them to stink up the room and invade our space. We don't want to have to see them in their current physical state, surrounded by the decomposing corpses of their companions. We want to send them
