At the beginning of the Car Mechanic Simulator 2018 game, players are offered a four-level tutorial that provides a small taste of the basic mechanics of the game. Players are given a choice of a humanoid or an animal's-eye-view of the car upon entering the interface. Players can then use the mouse to control their car, while basic buttons include the ability to start and stop the car, adjust the temperature of the car, control its speed, and fire up a fire extinguisher. Cutscenes show various sequences, such as when the car starts, when a gas station is repaired, and when the vehicle is being inspected. In addition to the tutorial, players can also use a mini-game to practice basic controls of the driving simulator. The mini-game consists of a course with three sections of increasing difficulty that introduce players to the basic navigation mechanics of the game.
