In FIFA 22, every dynamic movement in all player statistics is now powered by the gameplay data itself, not from a set of predetermined movements for each player. Movements that are not possible in real life are now possible and real life-like. Players will feel weightier, snappier and more powerful thanks to the inclusion of realistic animations and controls. New Player Types The change to a new ball physics engine results in a faster, more powerful ball and gameplay. Players will now face off against a more realistic ball in dynamic, unpredictable, unpredictable and unpredictable high-intensity levels. Players will now fight harder for possession and ultimately for the goal. These changes in the ball physics will lead to players making more and better goals, with players able to make a goal from greater distances on more types of shots and crosses. Other players will now do all they can to win the ball back and return it forward, making defenders work harder to win it back for their side. Players will also feel more unpredictable because of the unpredictable ball, making its every trajectory, bounce and moment critical to creating the best moments. The team ball mechanic, which allows for several players to share possession and control the ball with a collective boost of passing accuracy and creativity, is now more advanced and uses the new ball physics. Players will now be able to pass the ball with greater speed, accuracy and even spin without receiving a free kick. Players will now also feel more aggressive when they are closest to the ball. The adjustments to “Body Control” give players more agility, while the new “Physics Control” is easier to master and requires less finesse. “Muscle Memory” has also been improved to make the game smoother and more responsive. The new addition of “HyperMotion” (HM) technology from EA SPORTS FIFA 20, which adds in-game motion capture data from 22 real players who played a complete, high-intensity football match in motion capture suits, will be available on Xbox One, PlayStation 4, PC and Nintendo Switch later in the year. FIFA 22 takes real-life player movement data and turns it into lifelike, authentic actions and, with new player types and ball physics, a whole new ballgame. Check out the new Player Interviews page for more insight into real-life player characters and the creativity and training they put in to make themselves the best they can be.

Another great addition to FIFA 20 Ultimate Team is Draft Teams (XTGA). It's a new way to build and manage your FUT Team. You can now draft a team based on your favorite player, e.g. Joao "Dani Alves" Moreto, with the new Player Creator interface available in the Squad Management. Enhanced Player Chemistry Everyday Chemistry takes a new approach to Chemistry within the FUT context in the form of enhanced squad management and an improved in-game player chemistry toolset. The new player chemistry toolset will allow players to discover synergies within the squad and improve their game as the season progresses by analysing how the team is working together. These discoveries are applied to your team and your players' attributes gain an additional boost. This system can be accessed directly from the player or manager views of the FUT player screen. Optimised Progression From now on, your choice of team in FUT tournament mode directly influences the path to the tournament cup. You no longer need to progress through a tier to be able to buy a team,

as the FUT mode features a career mode that brings you to your destination. Global Team Chassis The most advanced Global Team Chassis in FIFA history.
