A program called Photoshop Elements gives most of the same features as Photoshop CS6 (and later versions) at a significantly lower price. It is intended for those who don't want the full Photoshop software, and is a good introductory image-editing program for photographers, graphic designers, and others. Discovering a Few of Photoshop's Functions Photoshop is a powerful program that lets you do a lot of things with images. In this section, I give you the lowdown on a few of Photoshop's essential functions, ranging from the most basic to the most complex. As a general rule, you're encouraged to take a look at the commands and options available under the View or Edit menus in Photoshop and experiment on your own to familiarize yourself with these commands. Checking out the basics Your first decision about using Photoshop as a basic editor is whether to use a more traditional raster image editor or a digital image editor that uses vector graphics (digital illustrations). With a raster image editor, you work with a grid of squares or dots. With a vector image editor, you create shapes with lines. In either case, you can change an image through several basic steps: An image that contains colors is a raster image editor. An image that contains lines, or even other shapes, is a vector image editor. With a raster editor, an image is converted to a digital raster file. Each dot represents a single pixel in your image. The image remains as a raster file. It can be saved in many formats; for example, as a GIF or TIFF file. With a vector image editor, an image isn't changed from a digital file containing the same lines and shapes it started with. Instead, the lines or shapes are captured as vectors. These lines and shapes can then be edited using any illustration software, such as Adobe Illustrator, or may be converted to a raster (bitmap) image. The vectors are then converted into a raster file. The original file remains a vector file in the computer. I discuss each type of editing in the sections that follow. Understanding image editing Photoshop's editing features cover a wide range of tasks, including Image resizing. Resizing an image changes the size of the pixels without changing the overall layout of the image, which is often desirable. Resizing comes into play when you use an image for a web page or for use in any other electronic media

Using Differentially Expressed Genes to Detect Breast Cancer Susceptibility in BRCA1 and BRCA2 Mutation Carriers. To detect breast cancer susceptibility mutations in BRCA1 and BRCA2, often only one blood sample is sufficient. It is suggested that genes differentially expressed in breast cancer can be used as a second readout. In this study, by performing microarray analysis, we aimed to identify novel breast cancer susceptibility genes and to detect DNA repair variants. Compared to healthy controls, we identified 374 differentially expressed genes in BRCA1 and BRCA2 mutation carriers, of which 21% are BRCA1 and BRCA2 targets. Candidate genes were validated in a cohort of 20 BRCA1 and BRCA2 mutation carriers and 66 healthy controls. To this end, we used qRT-PCR analysis, conventional sequencing and the T7 assay to evaluate these candidate genes. We identified several genes previously reported in breast cancer, and identified novel breast cancer susceptibility genes: VAV3, RELN, SYNE1, HIF1A, and CLPTM1. Interestingly, all BRCA1 and BRCA2 mutation carriers presented a somatic BRCA1 C64A mutation. The presence of this BRCA1 variant is highly specific for BRCA1 carriers, with a sensitivity of 100%, suggesting that this variant is a useful additional biomarker to detect breast cancer risk in individuals with a previous family history.Q: Python: How to properly write a dictionary of lists? I have the following dictionary of lists. dict = { 'a': [1, 4, 7, 5, 3], 'b': [2, 8, 9, 3, 8], 'c': [5, 9, 9, 7, 7], 'd': [1, 5, 1, 3, 9], 'e': [5, 5, 5, 5, 5], 'f': [3, 3, 3, 3, 3]} I am trying to find the sum of every unique list within the dictionary. The above example gives me the following: d = {'a': [1, 4, 7, 5, 3], 'b': [2, 8, 9, 3, 8], 'c': [5, 9, 9, 7, 7],
