The systems of a heavy freighter are deteriorating fast. Due to the lack of time, repairs were not performed and only replacements of sensors and other equipments were made. Due to the slowdown of the ship's movement, the turret was also put out of operation. But there was one bridge crew that was hardly affected by the lack of the ship. They were engaged in the search for other ships and instead of the time for the ship's crew, they spent time on the search. This crew managed to sneak away when the search team was unconscious. They managed to jump to the nearest system, which was Jericho. Being close to their home, they are going to be activated there from time to time. The lawless star system marked on your map will contain their following ship: - Strong thrust engine - High resistance to damage - Long-ranged torpedo launchers - Powerful turret cannons The "Relic" was the first ship that the enemy was able to shoot down in the solar system's biggest asteroid belt. It fell into the depths of the space, and few days after, the main systems were destroyed. Only the bridge module remained and it is not easy to repair. This information is enough for mercenaries to earn a substantial profit. "G2" cannons and cannon turrets According to comments from the Mendes family, the Relic-class destroyers participated in the attack on several cyber bases and inflicted significant damage to the enemy. More recently, the Rangers were licensed to manufacture a batch of ships specifically to be controlled by the AI. The Liu Family will also receive one destroyer as part of the "on the remaining forces of Jericho" agreement.
