There are basic editing layers you can use with Photoshop to outline your image. Layers are the building blocks of a Photoshop document. They give you the flexibility to add, change, or remove objects on the same level as the rest of your artwork. You can layer color, texture, and pattern changes without causing the original image to be affected. Photoshop provides many

---

customizable Layers, including layers for adding text, annotating images, patterns, and more. Layers can be grouped together and adjusted to overlay one item with another. When you open an image, it's usually organized with many different layers. Layers are arranged in a certain order with the most recently created layers appearing on top of older layers. Photoshop can offer different options to the user, including placing Layers on a separate layer and

---

setting the Layers' stacking order. Layers have a preview button that's used in the Layers palette to view the contents of each layer. You can always use the Backspace (Backspace) key combination on the keyboard to remove Layers from the document. You can use Layers to easily add text to your image. Text Layers are useful when there is something you would like to highlight, such as a person's name or product label. They are also helpful when you want to

---

write a list or number. You can create Text Layers and add text in any place you like on the Layers palette. The text can be a predetermined text string or a document's contents. Creating layer masks

When creating a new file in Photoshop, there are many different options you can choose, ranging from effects to quality settings. However, one feature you can opt for from the start is the creation of a Layer Mask. Most people create Layer Masks to modify an

---

image's background. For example, the background could be a bright color and you would like to paint over the color. There are many different ways to create a Layer Mask and Photoshop offers users many ways to layer masks. To create a Layer Mask, choose Layer • Layer Mask • New. This opens up the new Layer Mask options in the Layer Mask palette. You can create masks using Layers, Smart Objects, and other objects in your layer stack. Layer Masks

---

can only be used in Photoshop or in a native Photoshop Portable Document Format (PDF) file. Layer Masks have their own help area in the Layer Mask window. Creating a Layer Mask means making the Layers below

President Donald Trump's administration, after months of silence, on Tuesday joined the international community in recognising Syria's opposition army, the Syrian Interim Government (SIG). The White House released a statement on Twitter with the president's signature. The statement recognises that the SIG has been the most effective fighting force against

President Bashar Al-Assad's regime, calling for the "unconditional surrender" of all remaining Assad's forces. It marks the latest action by the administration in the Syrian war, a conflict which has killed more than a quarter of a million people in four years of fighting, according to the United Nations. The official statement from the White House reads: In recognizing Syria's Interim Government, President Donald J. Trump is providing support to the Syrian

Q: Connect the following equations The following is a question from a textbook. I'm just stuck on it. I also tried drawing a scatter plot and I don't really know how it could help in answering the question.

A: Good guess! The equation is asking to find  $x, y$ , for the point with coordinates  $(x, \frac{y}{2})$ . Since the equation is a plane, the system should be

---

able to be solved by setting the two coordinates equal to one another. Which gives:  $x = \frac{y}{2}$ . Plug that into the other equation, and you get the line:  $x^2 - 2y^2 + 1 = 0$  To find all the  $x, y$  pairs that lie on the line, you want to find the roots of the above equation. First, find the discriminant of the quadratic equation:  $\Delta = 4y^2 - 4$ . It is positive when  $y$  is between  $-1/2$  and  $1/2$ . Second, it is easy to find where these  $x, y$  pairs are:  $x \pm \sqrt{\Delta}$

---

$a = \pm \frac{1}{2} \sqrt{4y^2 - 4} = \frac{y}{2}$

You can also write the equation in terms of  $x, y$ :

$x^2 - \frac{1}{2}y^2 + 1 = 0$  as the vertical line between the points:

$(x, y), (x, -y/2)$ . Q: A packet sent

through the Raspberry Pi's WLAN is being discarded I have two Raspberries Pi3 with the same firmware and the same OS. Both configured with WLAN. The first Raspberry Pi is set as Server and the second is configured as Client.

The client is set to only communicate with the server and tries to connect to the specified IP to establish a TCP connection. The client successfully establishes a connection to the server, it detects the "client" role of the server but I don't receive any "ACK" packet. After some retries I tried to send a ping packet from the client to the server and the server should send a "Pong" response back to the client. But the packet is discarded by the server.
