HPC Â· Media and Entertainment Â· Network Operating System Â· Security Â· Storage Â· Telecom. pipeline optimized using Jarvis, the system achieved 5% improvement on accuracy,. NeMo is a Python toolkit that makes it easy to experiment with new modelÂ· .Validation of the Brazilian version of the WHO questionnaire on hip fracture risk assessment. The aim of this study was to validate the Brazilian version of the WHO questionnaire on hip fracture risk assessment (WHORE). A sample of patients from an orthopedics hospital who were at least 55 years of age, either men or women, and with a history of previous fractures were included in the study. Among the 633 eligible patients, 528 completed the questionnaire on hip fracture risk. Data were collected using a self-administered questionnaire. The patients self-administered the WHORE at baseline. The Brazilian version of the questionnaire showed 100% validity and 100% reproducibility, and showed excellent results regarding patient acceptability. Data from the WHORE were correlated with the occurrence of a previous fracture and gender, and the results showed that the WHORE is a reliable method of identifying elderly patients at risk of hip fracture. It is concluded that the Brazilian version of the WHORE is an excellent instrument that can be used to identify patients at risk of fractures, and that can be applied in the outpatient setting of orthopedic
