application. For those who've never heard of it before, the tool offers a variety of system information properties and data. At first, this app seemed like a poor fit for the Windows 8 Start Screen and Modern UI environment, but we've come to realize its potential.

Let's take a closer look at this free Windows 8 app. Data The System Information application gets loads of data from Windows.

You can explore and read as much information about your computer as you want, including hardware details, information about Windows components, system information, updates and system properties. Change Data If you press the Change button, you'll be able to see the last time you were viewed and the last time the application was updated (if it's available). The last used language will also be displayed as a point of reference.

Applications The Home screen is almost empty when it's opened. However, the applications you have installed on your computer will be listed here. You can access them or learn more information about their capabilities by clicking on their names. To install or remove applications from the app list, click on the plus sign at the end of each row, or drag and drop it to a location on the home screen. Recently The Recent section of the app displays any recently used applications. You'll see the name of the application and the buttons used to access it. Explore The Explore section allows you to learn about the system information you can read in the System Information window. If you don't have a lot of time to read, you can choose to display several options at once. About This screen allows you to view several details about the application. For instance, you can specify the location of the application's data, choose the language, select and sort the data, select groups of data, and define how the data in the various sections will be displayed. Control Panel This is the biggest surprise we've found in this app. At first glance, the System
