Biomutant is a story-driven open-world action-adventure game for PC, Xbox One, and PlayStation 4. Inspired by the worlds and characters from the films, "Mutant Year Zero" and "Revenant," and the books of the "X-Men" franchise, the player will step into the role of a mutant – one of the runaways who have tried to escape the oppression of the X-Men. From an open-world setting, players will explore lush landscapes, battle dark forces and solve paranormal mysteries in

a desperate quest to save the mutants of America! During the early 1980s, the United States was devastated by a series of apocalyptic events known as the "Human Extinction Event." After its mere mention to the President by the scientists (an event known to the government as "Project Nightfire") and the super mutants, two groups of mutant militia, known as "Mutant Rights Activists" (MRAs) and "Monster Mutants," decided to act. An alliance of human and mutant organizations became known as the "Authority." The Order (a super-powered, dark force) was born. Still dreaming of freedom, a rebel group of X-Men members takes an army of mutant "runaways" to America. Starting a new life among humans, the Revenants have dreamed of freedom. On their way to a quiet life, they stumble upon a sinister organization that threatens everything they know. They must join a group of

renegade mutants in a fight for the freedom of all. The game currently is available on PC through Steam and DRM-Free on Xbox One and PlayStation 4. We had tons of fun making this game and the videos were great as well. There will never be another game like this and you will never have this amazing experience again :) The music is mix of Darker Edge music but is still listenable. And yes if you don't want to hear music, just stop and the game will still be awesome. In the opening scenes of Nuclear Blaze, you're dropped into the middle of a city after receiving a phone call that requires you to evacuate it, and the ensuing conflict isn't so much a story, but a series of strategy-based challenges to see just how quickly you can get out. Like most of these matters, there isn't much nuance to the core gameplay. You will destroy the other players' base, and then you will destroy their lives. When you blow up their city, you're allowed to destroy anything and everything you'd like. This isn't to say it's a messy kind of game — but it does throw a pretty substantial amount of stuff your way. Nuclear Blaze is a mixed bag of genres. The "story" that plays out is primarily an excuse to explain some strategy. For example, early in the game, you destroy some buildings that

are used to power up your nuclear bomb. You can blow these buildings up, but you'll need to build them back up once you're out of the city. As you progress in the game, you're allowed to explore and uncover more about what's going on. You will find various nukes, platforms to walk across, and even, on one level, a giant time-machine of sorts. In a game like this, it's hard to objectively rate it. Sure, I can say it's fun, but I can also say that I'm exhausted by what it wants me to do. You really are playing a game where you use nothing but nukes to blow up cities, but there are no survivors in this game. Your only real goal is to win. A bit of a mixed bag in my eyes. It's Fun, but it's also BrokenI really like playing Nuclear Blaze. I like how frantic it is, and how it makes me feel like I'm the leader of the country with nukes. I like how you can build up your nukes and then launch them at the other players city to devastate their day. I like

how fast the game is. Sure, it can be tough, but if you get a leg up, you can launch a large nuke and demolish a large area in seconds. Sure, it's annoying that it's broken, but I

There are a few reasons why I haven't followed the ASL sky-maps with much interest lately. First, I recently started working as a field assistant at Kitt Peak National Observatory in the summer of 2012. During the 2 year program, we do not run our own facilities. We work with other National and State funded facilities run by other government agencies or private institutions. It is a very intimate working experience with the field staff for all the astronomers on a weekly basis. It is really great to see the persons doing the jobs you're going to do in the future and their approach in the workplace. This is also a profession with a lot of substance to it: you have to get up and out in the wilderness to protect rare objects from wandering little kids or to look for the next class of transient variable stars. But the thing that I enjoy the most about being at Kitt Peak is the understanding my field has on equipment and observing techniques. The gaps in the checklist that I hadn't even realized were missing. On every single evening I get to see a spectacular piece of equipment in action. Tonight I even got to double check the list of equipment my supervisor is giving me tomorrow for my own field setup. The ubiquity of access to amazing gear makes the journey to the telescope an even better experience. Which brings me to the second reason: Open Vizier and Crowdsourcing! I recently downloaded the new version of the Open Vizier application, with the goal of

using it in my spare time for capturing data: I stumbled on a nice dataset the SAO Palomar Sky Survey (POSS). I decided to mount the GIRAFFE (GMOS) on my telescope and scan the skies north of the galactic plane using the Sloan Digital Sky Survey (SDSS) filter set. The results will be posted on the Vizier repository for all the NSO/German OAO ESO staff to use. Recently I also used the device to capture the Small Magellanic Cloud (SMC) using the blue channel of the FOV with the SDSS filter set. It was very intuitive to process the data using the existing images of the two galaxies and BOSS - the 'big data' survey run on the SDSS telescope at Apache Point in the northern hemisphere. But what I like best is the DAO-system used to control the camera. For this I have to thank Stefano Portinari. He suggested the use of a

The constant is a beauty. It is always sunny, with waves of blue and red pouring through the sky. A spring rain sprinkled the streets of the town of Raunewood, bringing love and happiness to all. The constant always reminds people of their childhood memories, stories and fantasies. The people of the constant never think twice about the well being

of others, always seeing a best before date and always looking forward to a fresh start. But what lies beneath the constant? Evil is lurking beneath the constant, with the constant hiding secrets that no one has ever known. The constant is a place of chance and happiness, like any other childhood memories, but it is this place, the constant, that holds the key to its very own kind of horror. How to start Spring Cleaning? Spring Cleaning is a horror game for those who like horror. While the size and the setup of the game is quite small, the game does not feel small at all. The game feels large and has a genuine feel of horror and fear. Gameplay consists of two phases: hiding and walking. The player needs to hide from other people

throughout the day, and when darkness falls the player will have to walk and explore each level that the player character is in. The game itself is simple but has a lot of options for the player character, giving the player a lot of control over what they want to do in the game. The player character starts the game with one outfit and one weapon. They gain experience throughout the day, and new items are available to the player as they play through the day. The objects within the game are simple, but they make the game feel real. It feels like there are objects in the game, and it feels like there are real people walking around. Events and objects in the game are also simple, giving the player a feeling of authenticity to the game. It

feels like there are people around the player, and not just some digital person. What will you find when walking the streets at night? Spring cleaning is a horror game for those who like horror. You will find that the experience in the game is not intense but gets pretty intense very soon. Gameplay consists of two phases: hiding and walking. The player needs to hide from other people throughout the day, and when darkness falls the player will have to walk and explore each level that the player character is in. The game itself is simple but has a lot of options for the player character, giving the player a lot of
