PDF files remain the primary file formats for paper-based text, whether in books or magazines. In journals, many of these paper-based publications are distributed in PDF format. On the Internet, PDF is the default format for many documents. PDF is a Portable Document Format (ISO 14651), and is used to describe a file format, not a physical paper document. PDFs can store text, graphics, images, and other types of content and have been created in numerous file formats, but the most common formats include PDF 1.2, PDF 1.5, PDF 1.7, PDF 1.8, and PDF 2.0. Many document editing programs can create and edit PDF documents. PDF is often used for the distribution of scholarly or technical papers, and as a result, many other file formats have been created for this purpose. There are also PDF editors or converters for a number of platforms which can convert text to PDF, including a number of Mac-only applications such as PDFMate and Preview. PDF-XChange Viewer is a free software for browsing, modifying and creating PDF-X structures from Microsoft Windows. It provides a standard user interface for working with PDF-X structures, and allows

for a vast range of actions (deleting, splitting, grouping, navigating, interpreting text strings and images). It is no longer under active development, as PDF-Xchange can now be obtained from the free and open-source LibreOffice project. In the past PDF-XChange was available at a cost, now it is freely available for Linux and for Windows also. Several file converters exist for Unix-like systems, including Ghostscript for Unix and OS X, and PDF-XChange Viewer. In addition, PDF converter programs exist for Windows, including spook, winpdf and GhostWin, and command-line based utilities. Internet In recent years, developers have created various browsers and web apps that use PDF as a method for browsing the web. Some of the advantages of using PDF as the primary file format include:
